

# The `hypcap` package

Heiko Oberdiek  
<oberdiek@uni-freiburg.de>

2008/09/08 v1.10

## Abstract

This package tries a solution of the problem with `hyperref`, that links to floats points below the caption and not at the beginning of the float. Therefore this package divides the task into two part, the link setting with `\capstart` or automatically at the beginning of a float and the rest in the `\caption` command.

# 1 Usage

The package `hyppcap` requires that `hyperref` is loaded first:

```
\usepackage[...]{hyperref}
\usepackage[...]{hyppcap}
```

## 1.1 Package options

The names of the four float environments `figure`, `figure*`, `table`, or `table*` can be used as option. Then the package redefines the environment in order to insert `\capstart` (see below) in the beginning of the environment automatically.

Option `all` enables the redefinitions of all four float environments. For other environments see the user command `\hyppcapredef`.

## 1.2 User commands

`\capstart` **\capstart:** First this command increments the counter (`\@captype`). Then it makes an anchor for package `hyperref`. At last `\caption` is redefined to remove the anchor setting part from `hyperref`'s `\caption`.

The package expects the following structure of a float environment:

```
\begin{float}...
\capstart
...
\caption{...}
...
\end{float}
```

There can be several `\caption` commands. For these you need `\capstart` again:

```
\capstart ... \caption... \capstart ... \caption...
```

And the `\caption` command itself can be put in a group.

With the options, described above, the extra writing of `\capstart` can be avoided. Consequently, there must be a `\caption` in every environment of this type, specified by the option. If you want to use more than one `\caption` in this environment, you have to state `\capstart` again.

`\hyppcapspace` **\hyppcapspace:** Because it looks poor, if the link points exactly at top of the figure, there is additional space: `\hyppcapspace`, the default is `0.5\baselineskip`, examples:

```
\renewcommand{\hyppcapspace}{0pt} removes the space
\renewcommand{\hyppcapspace}{1pt} sets a fix value
```

`\hyppcapredef` **\hyppcapredef:** If there are other float environments, that should automatically execute `\capstart`, then a redefinition with `\hyppcapredef` can be tried:

```
\hyppcapredef{myfloat}
```

Only environments with one optional parameter are supported.

`\capstartfalse` **\capstartfalse, \capstarttrue:** Since 2008/09/08 v1.10.  
`\capstarttrue` They disable and enable `\capstart`. They can be used to cancel the effect of a redefined float environment. Example:

```

\documentclass{article}
\usepackage{hyperref}
\usepackage[figure]{hycap}[2008/09/08]

\begin{document}
  \section{Hello World}
  \begin{figure}
    \caption{Figure with caption A}
  \end{figure}
  \captionfalse
  \begin{figure}
    Figure without caption
  \end{figure}
  \captiontrue
  \begin{figure}
    \caption{Figure with caption B}
  \end{figure}
\end{document}

```

### 1.3 Limitations

- Packages that redefine `\caption` or `\@caption`.

## 2 Implementation

```
1 (*package)
```

Package identification.

```
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{hycap}%
4 [2008/09/08 v1.10 Adjusting anchors of captions (H0)]
```

For unique command names this package uses `hc@` as prefix for internal command names.

First we check, if package `hyperref` is loaded:

```
5 \@ifundefined{hyper@@anchor}{%
6   \PackageError{hycap}{You have to load 'hyperref' first}\@ehc
7   \endinput
8 }{}
```

`\hc@org@caption` Save the original meaning of `\caption`:

```
9 \newcommand*\hc@org@caption{}
10 \let\hc@org@caption\caption
```

`\if@capstart` The switch `\if@capstart` helps to detect `\capstart` commands with missing `\caption` macros. Because `\caption` can occur inside a group, assignments to the switch have to be made global.

```
11 \newif\if@capstart
```

`\hycapspace` The anchor is raised by `\hycapspace`.

```
12 \newcommand*\hycapspace{.5\baselineskip}
```

`\ifcapstart`

```
13 \newif\ifcapstart
14 \capstarttrue
```

`\capstart` The macro `\capstart` contains the first part of the `\caption` command: Incrementing the counter and setting the anchor.

```
15 \newcommand*\capstart{%
16   \ifcapstart
17     \H@refstepcounter\@capttype % first part of caption
18     \hyper@makecurrent\@capttype
```

```

19   \global\let\hc@currentHref\@currentHref
20   \vspace*{-\hyccapspace}%
21   \begingroup
22     \let\leavevmode\relax
23     \hyper@@anchor\@currentHref\relax
24   \endgroup
25   \vspace*{\hyccapspace}%
26   \hc@hyperref{\let\caption\hc@caption}%
27   \global\@capstarttrue
28   \global\advance\csname c@\@capttype\endcsname\m@ne
29   \fi
30 }

31 \ifpackagelater{hyperref}{2007/04/09}{%
32   \let\hc@hyperref\@gobble
33 }{%
34   \let\hc@hyperref\@firstofone
35 }

```

`\hc@caption` The new `\caption` command without the first part is defined in the macro `\hc@caption`.

```

36 \def\hc@caption{%
37   \global\advance\csname c@\@capttype\endcsname\@ne
38   \@dblarg{\hc@caption\@capttype}%
39 }

```

`\hc@@caption` This is a copy of package `hyperref`'s `\@caption` macro without making the anchor, because this is already done in `\capstart`.

```

40 \long\def\hc@@caption#1[#2]#3{%
41   \let\caption\hc@org@caption
42   \global\@capstartfalse
43   \ifHy@hypertexnames
44     \hyper@makecurrent\@capttype
45   \else
46     \global\let\@currentHref\hc@currentHref
47   \fi
48   \par\addcontentsline{%
49     \csname ext@#1\endcsname}{#1}{%
50     \protect\numberline{%
51       \csname the#1\endcsname
52     }}{\ignorespaces #2}%
53 }%
54 \begingroup
55   \@parboxrestore
56   \normalsize
57   \@makecaption{\csname fnum@#1\endcsname}{%
58     \ignorespaces#3%
59   }%
60   \par
61 \endgroup
62 }

```

`\hyccapredef` The macro `\hyccapredef` prepares the call of `\hc@redef` that will redefine the environment that is given in the argument.

```

63 \def\hyccapredef#1{%
64   \expandafter\hc@redef\csname hc@org#1\expandafter\endcsname
65     \csname hc@orgend#1\expandafter\endcsname
66     \expandafter{#1}%
67 }

```

`\hc@redef` The old meaning of the environment is saved. Then `\capstart` is appended in the begin part. The end part contains a check that produces an error message in case of `\capstart` without `\capstart` (`\capstart` has incremented the counter).

```

68 \def\hc@redef#1#2#3{%
69   \newcommand#1{}%
70   \expandafter\let\expandafter#1\csname#3\endcsname
71   \expandafter\let\expandafter#2\csname end#3\endcsname
72   \renewenvironment*{#3}[1][1]{%
73     \ifx\##1\%
74       #1\relax
75     \else
76       #1[#1]% hash-ok (compatibility for float)
77     \fi
78     \capstart
79   }{%
80     \if@capstart
81       \PackageError{hypcap}{You have forgotten to use \string\caption}%
82       \global\@capstartfalse
83     \else
84       \fi
85     #2%
86   }%
87 }

```

At last the options are defined and processed.

```

88 \DeclareOption{figure}{\hypcapredef{\CurrentOption}}
89 \DeclareOption{figure*}{\hypcapredef{\CurrentOption}}
90 \DeclareOption{table}{\hypcapredef{\CurrentOption}}
91 \DeclareOption{table*}{\hypcapredef{\CurrentOption}}
92 \DeclareOption{all}{%
93   \hypcapredef{figure}%
94   \hypcapredef{figure*}%
95   \hypcapredef{table}%
96   \hypcapredef{table*}%
97 }
98 \ProcessOptions\relax
99 </package>

```

## 3 Installation

### 3.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/hypcap.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/hypcap.pdf](#) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

*TDS* refers to the standard “A Directory Structure for  $\TeX$  Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

### 3.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

<sup>1</sup><http://ftp.ctan.org/tex-archive/>

**Script installation.** Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 3.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain- $\TeX$ :

```
tex hypcap.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
hypcap.sty → tex/latex/oberdiek/hypcap.sty
hypcap.pdf → doc/latex/oberdiek/hypcap.pdf
hypcap.dtx → source/latex/oberdiek/hypcap.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

### 3.4 Refresh file name databases

If your  $\TeX$  distribution (te $\TeX$ , mi $\TeX$ , ...) relies on file name databases, you must refresh these. For example, te $\TeX$  users run `texhash` or `mktexlsr`.

### 3.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk hypcap.pdf unpack_files output .
```

**Unpacking with  $\LaTeX$ .** The `.dtx` chooses its action depending on the format:  
**plain- $\TeX$ :** Run `docstrip` and extract the files.

**$\LaTeX$ :** Generate the documentation.

If you insist on using  $\LaTeX$  for `docstrip` (really, `docstrip` does not need  $\LaTeX$ ), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hypcap.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdf $\LaTeX$ :

```
pdflatex hypcap.dtx
makeindex -s gind.ist hypcap.idx
pdflatex hypcap.dtx
makeindex -s gind.ist hypcap.idx
pdflatex hypcap.dtx
```

## 4 History

[1999/02/13 v1.0]

- A beginning version, published in newsgroup `comp.text.tex`:  
“Re: `hyperref` and `figures`”<sup>2</sup>

[2000/08/14 v1.1]

- Global assignments of `\if@capstart` in order to allow `\caption` in groups.
- Option `all` added.

[2000/09/07 v1.2]

- Package in dtx format.

[2001/08/27 v1.3]

- Bug fix with `hyperref`'s `pdfmark` driver  
(`\leavevmode` in `\hyper@@anchor/\pdf@rect`).

[2001/09/06 v1.4]

- Small fixes in the dtx file.

[2006/02/20 v1.5]

- Code is not changed.
- New DTX framework.

[2007/02/19 v1.6]

- Fix for `hypertextnames=false`.

[2007/04/09 v1.7]

- Stuff in `\caption` moved to `hyperref`. This avoids redefinitions of `\caption` and `\@caption` (idea of Axel Sommerfeldt).
- Fix for `subfigure` (Marco Kuhlmann, Amilcar do Carmo Lucas).

[2008/04/14 v1.8]

- `\hc@redef` fixed to get package `float` work (Axel Sommerfeldt).

[2008/08/11 v1.9]

- Code is not changed.
- URLs updated.

[2008/09/08 v1.10]

- `\capstartfalse` and `\capstarttrue` added.

---
